FREEZE FAT AWAY WITH CLATUU

CLATUU IS THE WORLD'S FIRST 360° DUALSCULPT HANDPIECE SYSTEM FOR NON-SURGICAL FAT SCULPTING USING CONTROLLED COOLING TO TRIGGER APOPTOSIS.

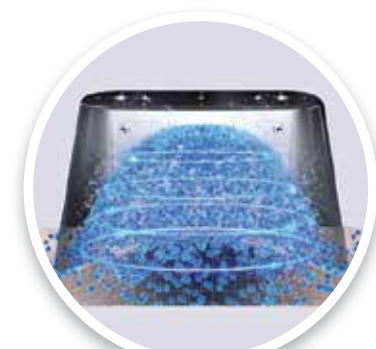

PRODUCTS

MECHANISM OF ACTION

Clatuu achieves fat reduction through apoptosis. This is brought about by cooling fat cells, bringing about a sequence of events that leads to the destruction and elimination of fat cells without affecting any of the surrounding tissue.

How it works

1. Drawing tissue into the handpiece is easy and with minimal discomfort.
2. Target fat tissue is cooled and maintained at the ideal temperature throughout treatment, leaving normal cells intact.
3. Twenty to 30 percent of fat cells are destroyed and removed from the target area through normal lymphatic processes.

MAXIMUM COVERAGE

WITH CLATUU 360° SURROUND COOLING

OLD TECHNOLOGY

Clatuu, distributed in Australia by Cryomed and registered with the TGA, is the new non-surgical solution to reduce stubborn fat. Key differentiators include the world's first 360° dual handpiece system for maximum coverage and faster, more effective fat reduction.

With the lowest consumable costs in the marketplace, Clatuu offers the latest non-invasive fat freezing procedure combined with good value and an even better ROI.

Clatuu works by gently drawing fatty areas into the patented 360° applicators and cooling the area to a temperature that causes fat cell apoptosis – while keeping normal cells intact. This is brought about by cooling fat cells to an optimal temperature, bringing about a sequence of events that leads to the destruction and elimination of fat cells without affecting any of the other surrounding tissue.

In both clinical and pre-clinical trials, Clatuu has demonstrated its efficacy. Gross and microscopic histological results confirmed the non-invasive cold-induced selective subcutaneous fat destruction, and showed increased pre-adiposity differentiation and increased activation of lipid catabolism.

Findings indicate that Clatuu fat freezing is a promising fat reduction device that is ideally used for body contouring and getting rid of stubborn fat – the kind that is resilient to exercise or diet.

With the ability to treat two sites at once, you can cut treatment time to half, saving you and your patients valuable time and increasing your clinic's profitability. **AMP**

ADVANTAGES OF CLATUU

DualSculpt handpiece with 360° surround cooling mechanism

Powerful cooling and suction

LCD control panels with start button on handpieces

Maximum 60-minute treatment with no downtime

Crystallises fat cells with no damage to surrounding tissues

Can treat two sites at once

Patented all-in-one matrix gel pad

Two types of applicators – flat type and wing type – to treat all areas of the body and patients of all sizes

BEFORE

6 weeks AFTER second treatment

BEFORE

10 weeks AFTER second treatment

BEFORE

12 weeks AFTER one treatment
